Mid Tropospheric Humidity and Tropical Cyclogenesis

Several field campaigns have examined environment before/after genesis:

TEXMEX (Bister and Emanuel 1997)

TCSP (Halverson et al. 2007)

RAINEX (Houze et al. 2006)

PREDICT (Montgomery et al. 2012)

...

-> These studies noted the importance of dry air in suppressing development (e.g. Zipser et al. 2009; Dunkerton et al. 2009, Komaromi 2012).

-> Use MW satellite observations and tracks of developing and non-developing Invest/TCs (Cossuth et al. 2013) to examine relation between MTH and TC development/intensification.

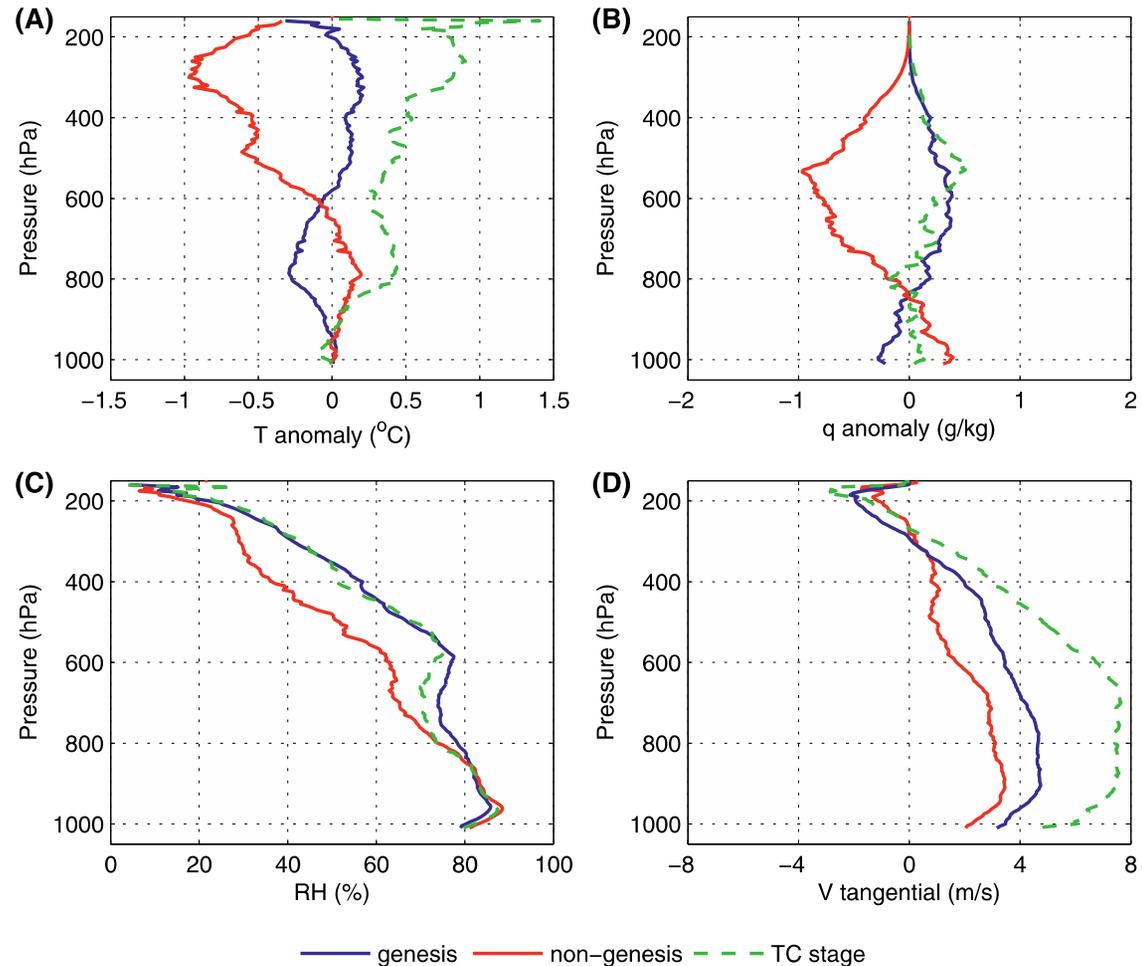

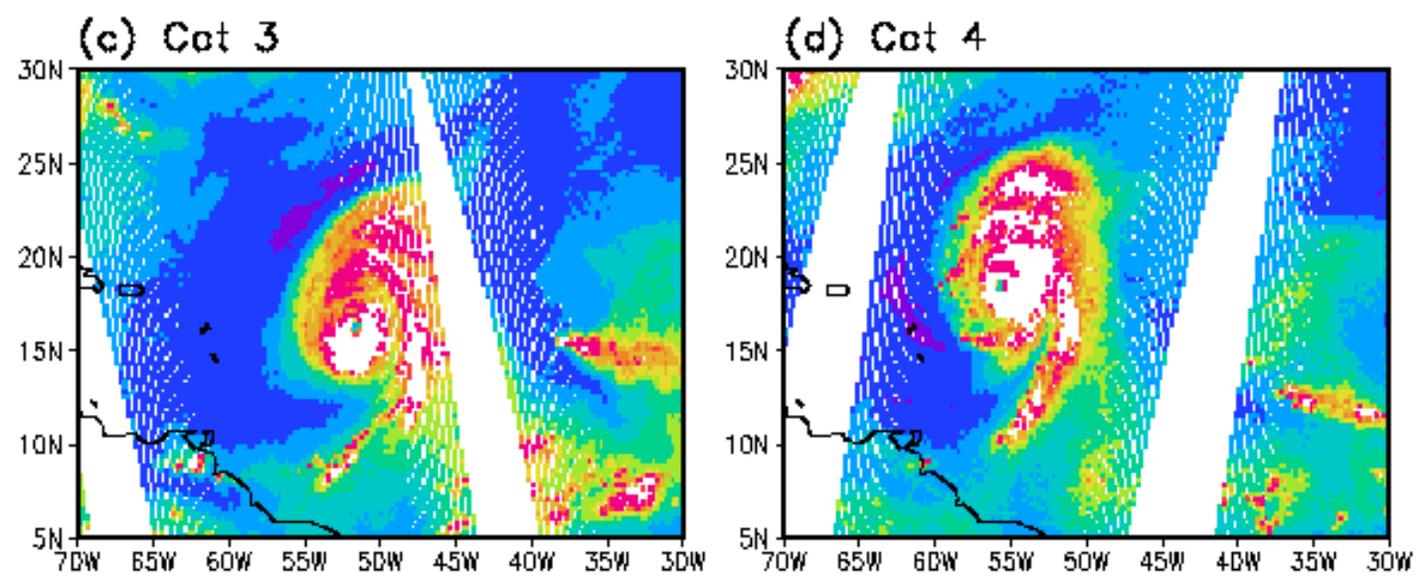

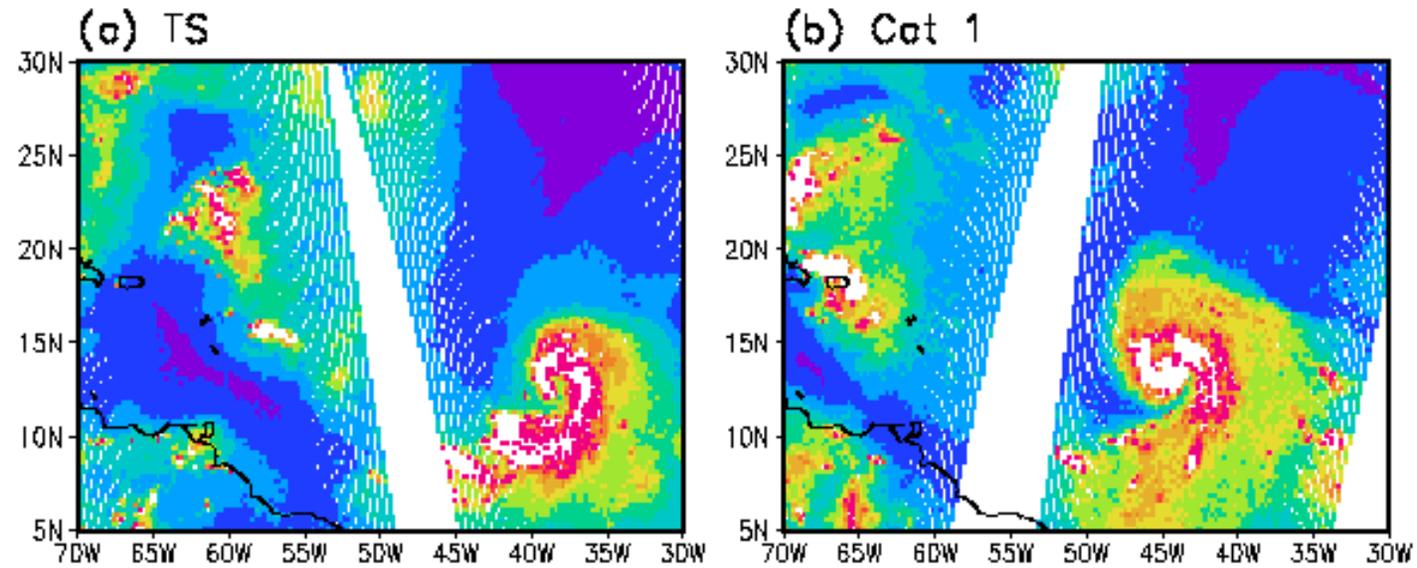

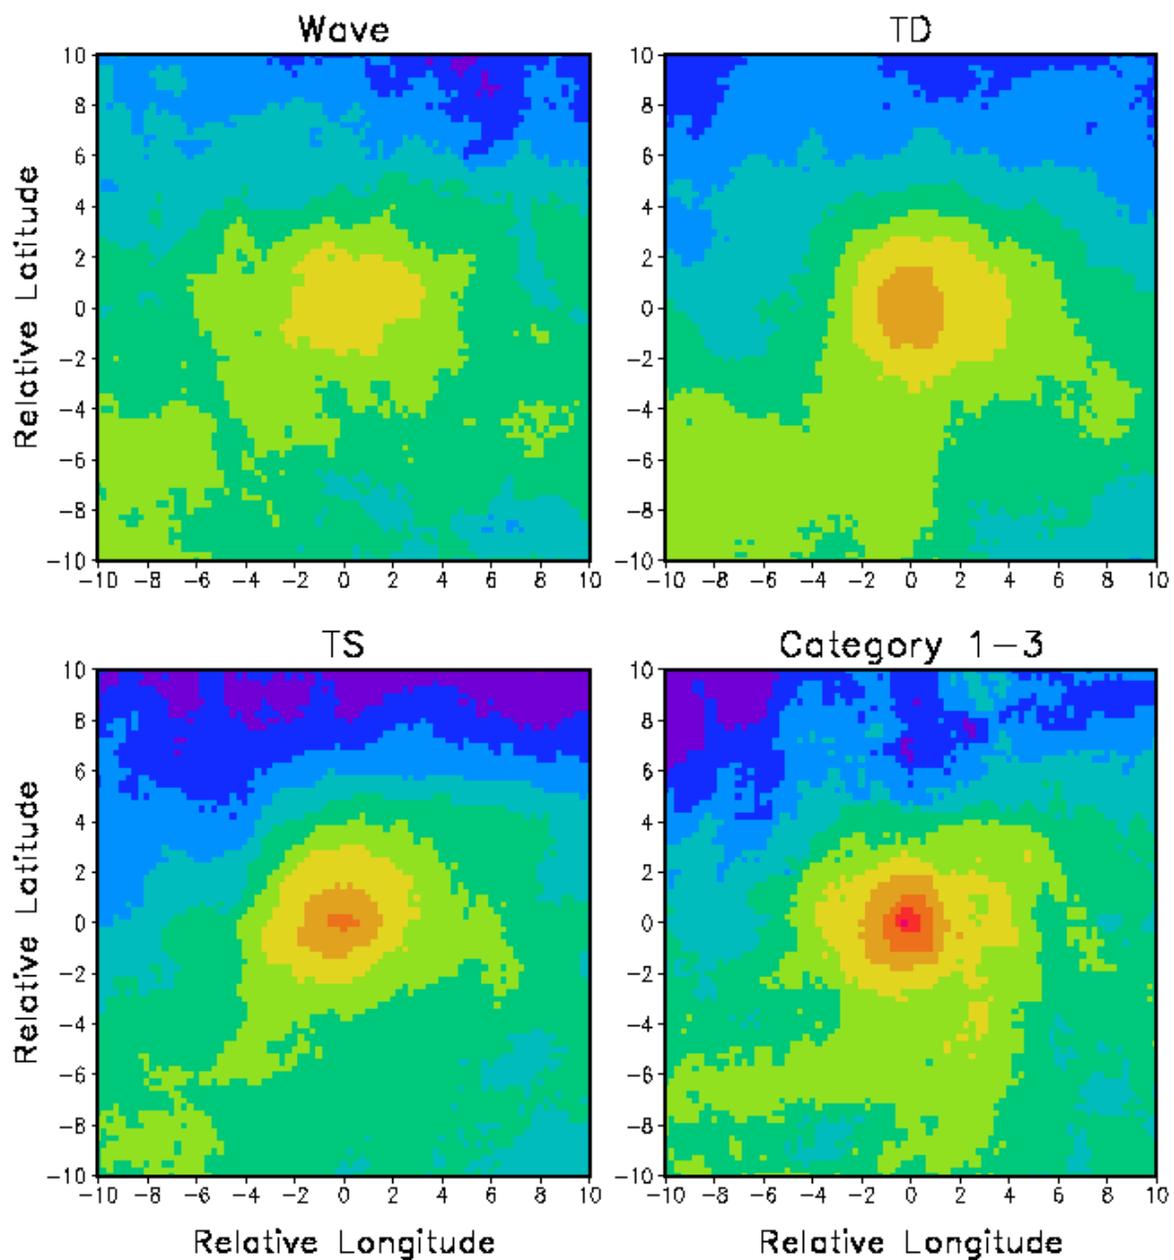

FIG. 3. Composite vertical profiles of anomalies relative to the PREDICT mean of (a) temperature, (b) mixing ratio, (c) relative humidity, and (d) tangential component of wind for genesis, nongenesis, and TC stage categories.

PREDICT (Komaromi 2012)

<INSERT MODELING STUDY HERE>

What determines regional patterns of circulation (precipitation) change?

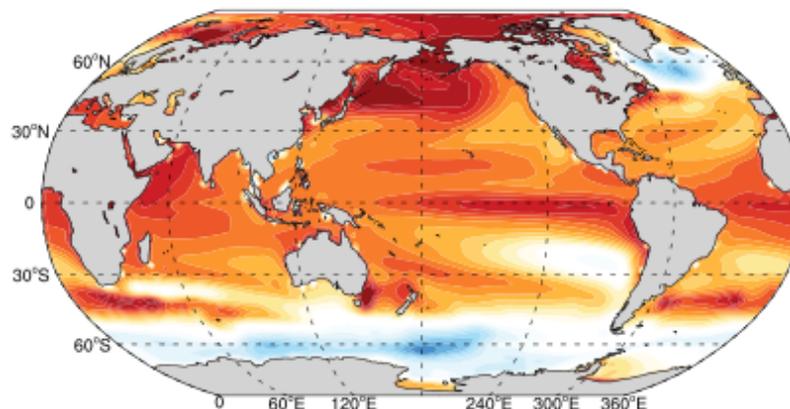

- A) Mean surface warming
- B) Spatial pattern of warming
- C) Ocean coupling
- D) Radiative heating from increased CO₂

Normalized Surface Warming: 8 member multi-model ensemble (CMIP5)

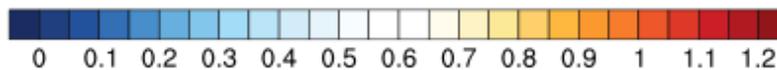

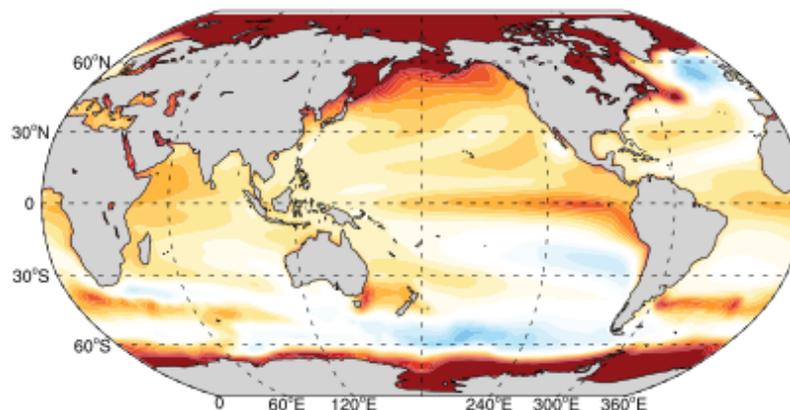

AGCM: Uniform-CTRL

AGCM: Structured-CTRL

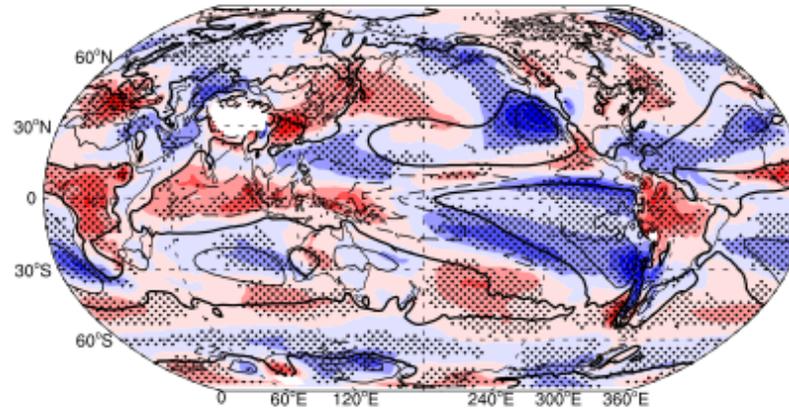

CGCM: Last20yr-First20yr 4xCO2

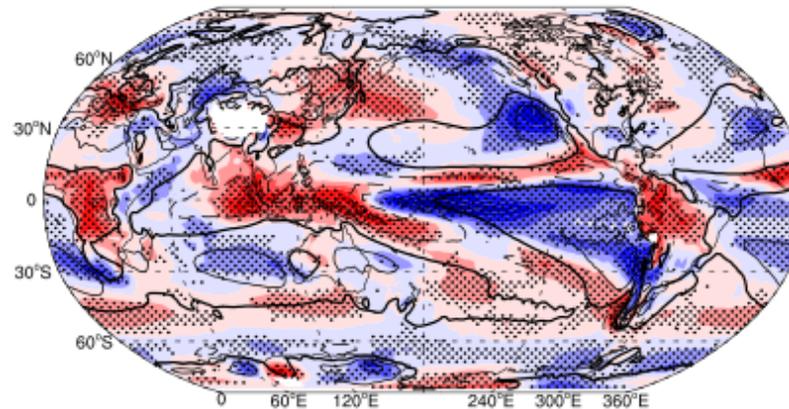

ω_{500} (Pa/s/K)

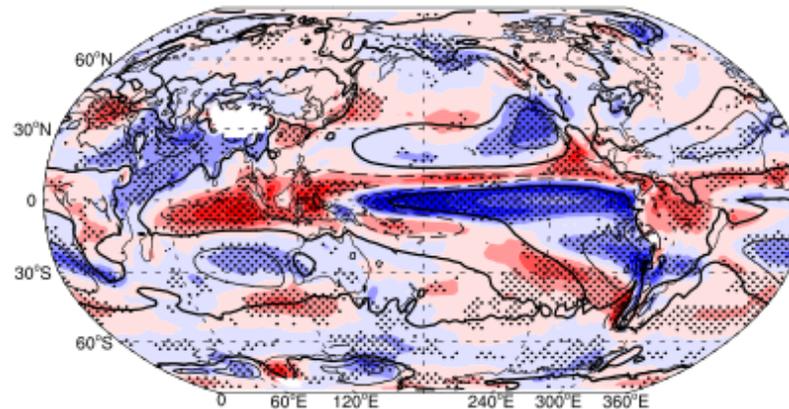

AGCM: Uniform-CTRL

AGCM: Structured-CTRL

CGCM: Last20yr-First20yr 4xCO2

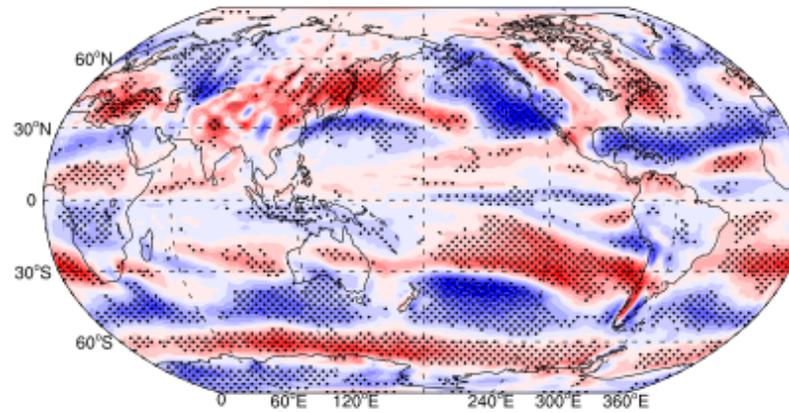

Tropics:

Weakening of Circulation
→ Change opposes mean
circulation
(Ma and Xie 2013)

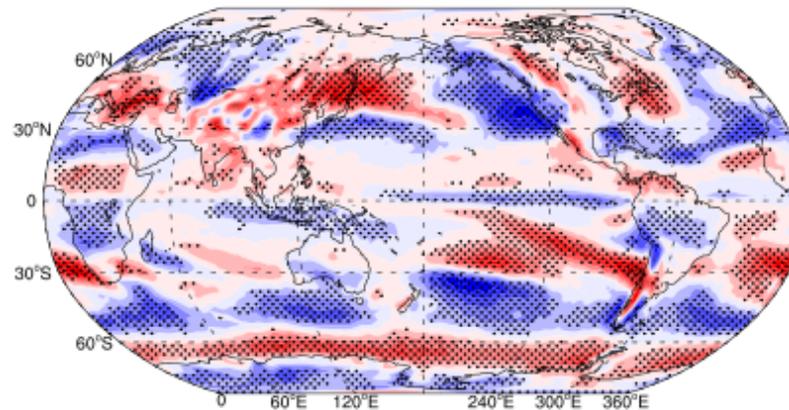

Extratropical response due
to dispersion of Rossby
waves from tropics?

Rosby Wave Source ($1/s^2/K$)

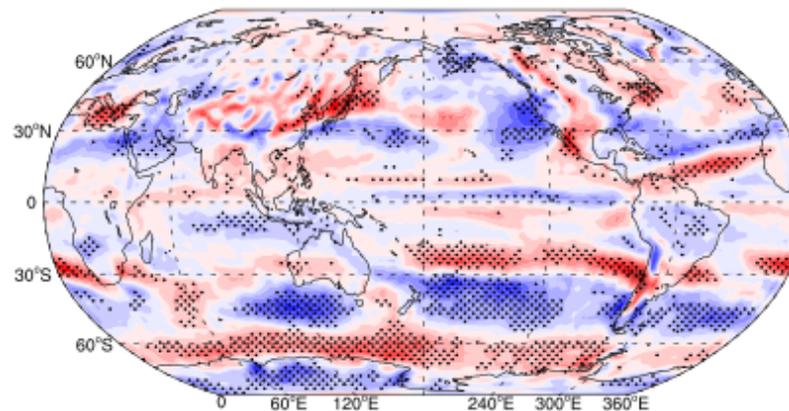

AGCM: Uniform-CTRL

AGCM: Structured-CTRL

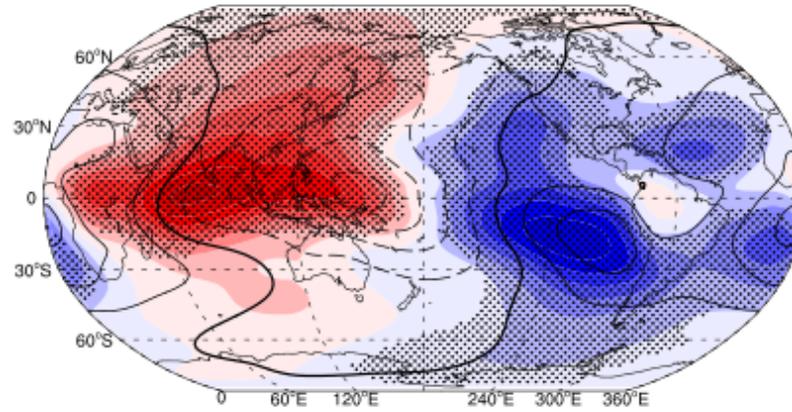

CGCM: Last20yr-First20yr 4xCO2

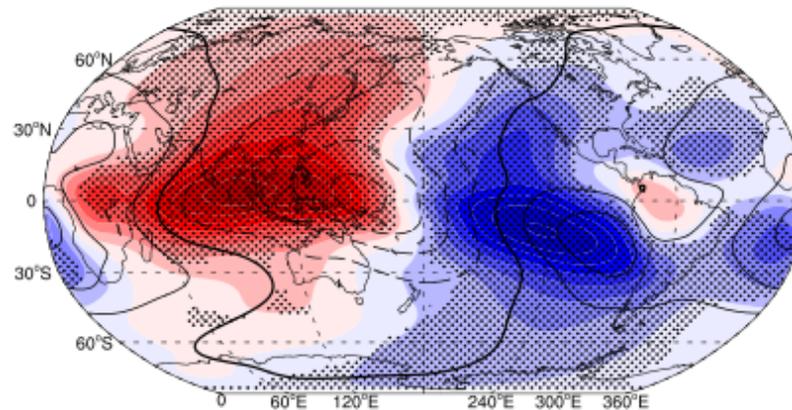

Extratropical response due to dispersion of Rossby waves from tropics

Velocity Potential (m²/s/K)

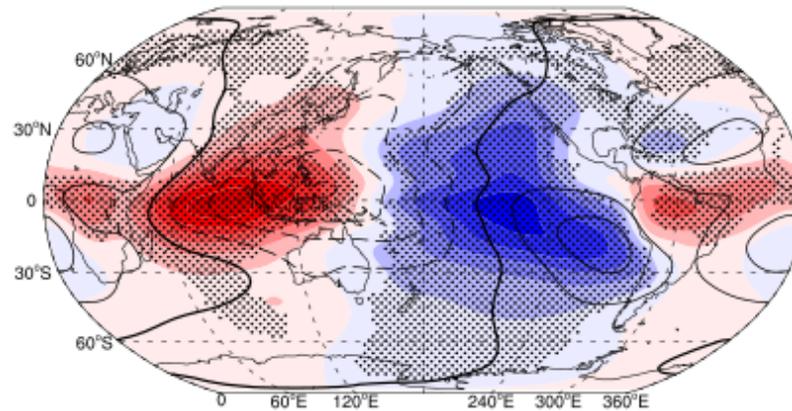

AGCM: Uniform-CTRL

AGCM: Structured-CTRL

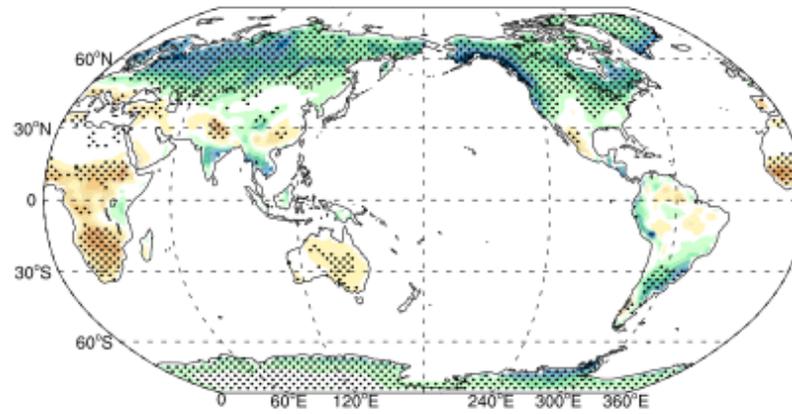

CGCM: Last20yr-First20yr 4xCO₂

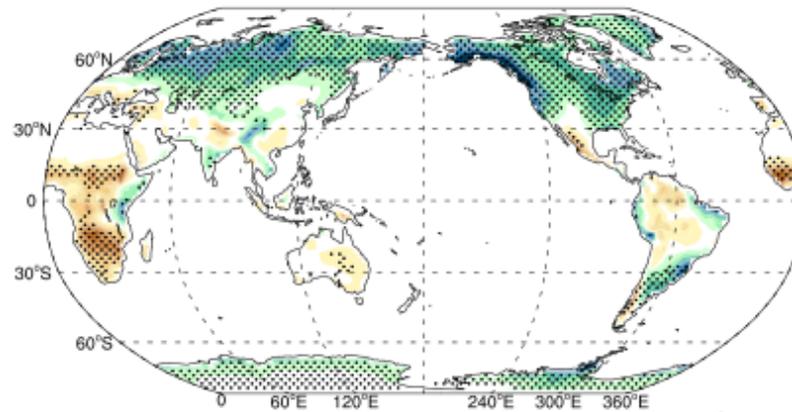

Precip (mm/day/K)

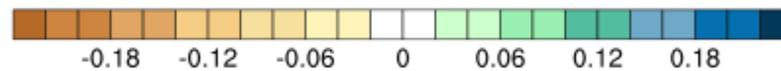

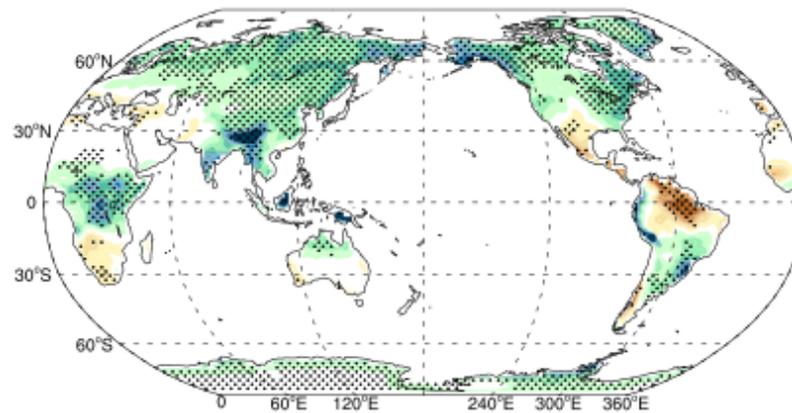

AGCM: Uniform-CTRL

AGCM: Structured-CTRL

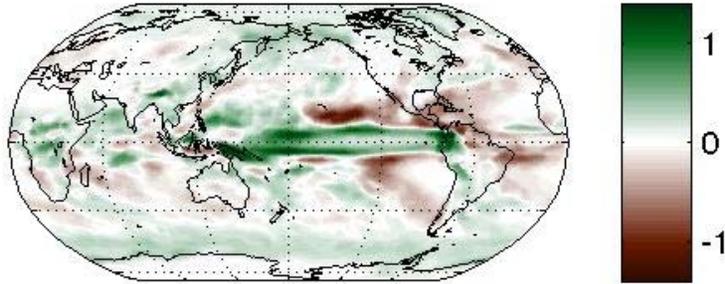

CGCM: Last20yr-First20yr 4xCO2

Is Coupling Important?

Precipitation Change 2xCO₂-1xCO₂

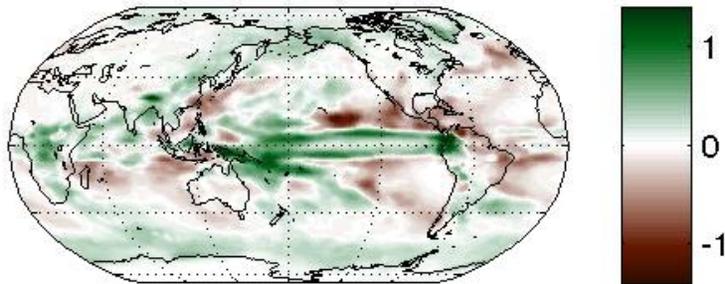

Coupled

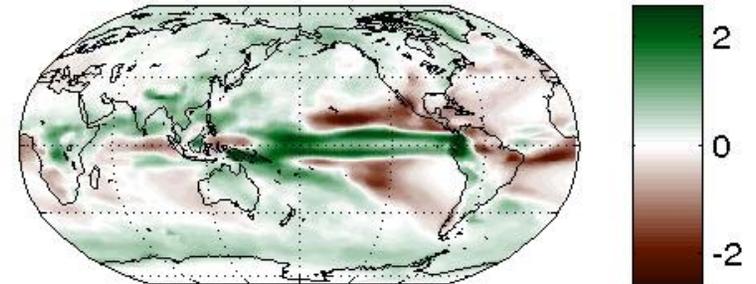

Precipitation Change 4xCO₂-1xCO₂

Precipitation Change 2xCO₂-1xCO₂

AMIP
(w/ Δ CO₂)
